BENEFITS OF LED LIGHTING

Even though LED lighting products produce fewer lumens, in comparison to Metal Halide lights, the visibility is significantly improved under LED lights.

- Low Heat Signature
- Immediate Strike Capability
- Low Power Requirements
- Reduced Up-lighting
- Lower Surface Reflection
- Increased Light Distribution
- Fewer Shadows
- Improved Visibility

LED lights have significantly less glare, a more uniform distribution of lighting, which helps to produce fewer shadows and increased visibility.

Switching to LED lighting can lead to approximately 40% savings on running and maintenance costs.
